

Ideation Phase

Empathize & Discover

Date	30 September 2026
Team ID	SWTID-2026-8886
Project Name	Implement Client Script and UI Policy for Incident
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Empathy Map for a Service Desk Agent

Working hypothesis - validate with real users

SAYS High-impact records need clear ownership before they are handed off.	THINKS If urgency and routing are incomplete, the next team loses time.	DOES Changes Impact, selects Assignment group and Assigned to, then saves.
FEELS Time pressure and concern about delayed response or poor reporting.	PAINS Missing fields, repeated follow-up, confusing feedback, list edits without context.	GAINS Fast triage, predictable form behavior, complete ownership, clear error messages.

Project example: High-impact Incident triage by a service desk agent.

Empathy Map for a Service Desk Agent

Working hypothesis - validate with real users

Empathy area	Incident triage observation
Says	High-impact Incidents need clear ownership before handoff.
Thinks	Incomplete urgency or routing slows the next team.
Does	Sets Impact, assigns group and person, then saves.
Feels	Under time pressure and concerned about delayed response.
Pains	Missing fields, follow-up, unclear feedback, list edits without context.
Gains	Fast triage, clear controls, complete record, understandable messages.

Project note: values use the standard Incident choices where Impact 1 and Urgency 1 represent High. Confirm field names and values in the target instance.
