

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-8886
Project Name	Implement Client Script and UI Policy for Incident
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	High impact controls	When Impact=1, apply policy on load and change.
FR-2	Routing required	Assignment group and Assigned to become mandatory at Impact=1.
FR-3	Urgency default	Set Urgency=1 when Impact changes to 1.
FR-4	Save validation	Block high-impact submission if either routing field is empty.
FR-5	List edit workflow	Decline direct State list edits and prompt the user to open the form.
FR-6	Reverse behavior	When Impact is not 1, reverse mandatory and read-only settings without clearing values.

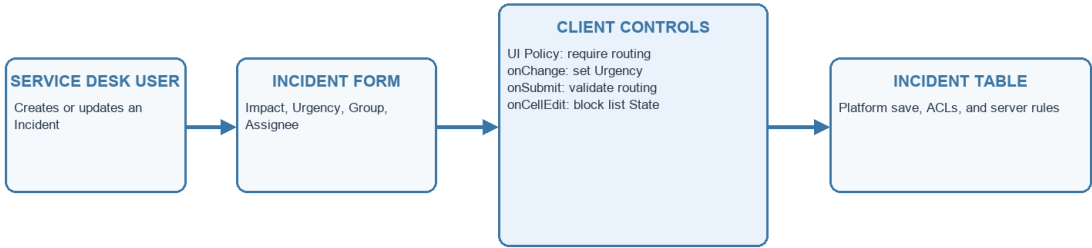

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Field-level errors and brief info message.
NFR-2	Security	UI scripts guide users; server rules enforce policy beyond the UI.
NFR-3	Reliability	Test create, update, reversal, list, and form paths.
NFR-4	Performance	No external API calls; measure in instance before rollout.
NFR-5	Availability	Depends on ServiceNow instance availability; no added service.
NFR-6	Scalability	Uses native Incident form controls; no new data store or service.

Incident High Impact Data Flow

Form inputs move through client controls to the Incident table

Client controls support data quality; enforcement for non-form paths must be server-side.

Incident field and save flow

Project note: values use the standard Incident choices where Impact 1 and Urgency 1 represent High. Confirm field names and values in the target instance.
