

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	30 September 2026
Team ID	SWTID-2026-8886
Project Name	Implement Client Script and UI Policy for Incident
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Incident form and client-control flow.

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

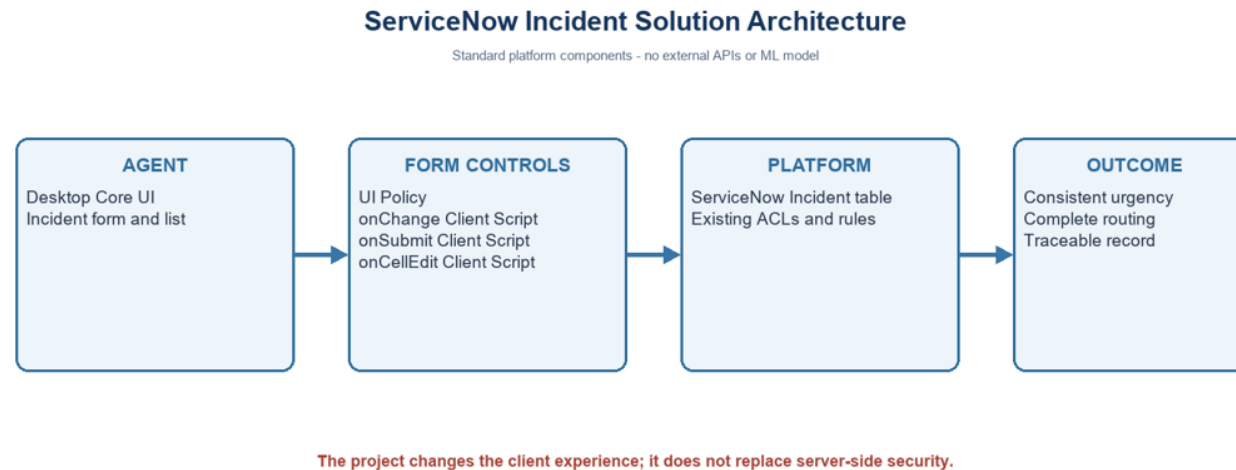

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User interface	Desktop Incident form and list	ServiceNow Core UI
2	Policy logic	Conditional mandatory/read-only behavior	Incident UI Policy
3	Change logic	Set Urgency High when Impact becomes High	onChange Client Script
4	Save validation	Check group and assignee at submit	onSubmit Client Script
5	List behavior	Decline direct State edit in list	onCellEdit Client Script
6	Data store	Incident records and standard fields	ServiceNow Incident table
7	Cloud database	No separate database configured	Platform-managed storage
8	File storage	No new file storage	Not applicable
9	External API 1	No external API used	Not applicable
10	External API 2	No external API used	Not applicable
11	ML model	No machine learning used	Not applicable
12	Infrastructure	Existing ServiceNow instance	Platform managed

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open source framework	No separate framework introduced	Native platform
2	Security controls	Existing ACLs remain; client rules are not security boundary	ACL/Data Policy/Business Rule as required
3	Scalable architecture	No new service or data store	Existing instance
4	Availability	Depends on instance availability	No additional dependency
5	Performance	Client logic, no external API	Measure in test instance

ServiceNow Incident Solution Architecture

Standard platform components - no external APIs or ML model

The project changes the client experience; it does not replace server-side security.

ServiceNow platform context

Project note: values use the standard Incident choices where Impact 1 and Urgency 1 represent High. Confirm field names and values in the target instance.
