

Project Design Phase
Solution Architecture

Date	30 September 2026
Team ID	SWTID-2026-8886
Project Name	Implement Client Script and UI Policy for Incident
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process - with many sub-processes - that bridges the gap between business problems and technology solutions. Its goals are to:

Find the best tech solution to solve existing business problems.

Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.

Define features, development phases, and solution requirements.

Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

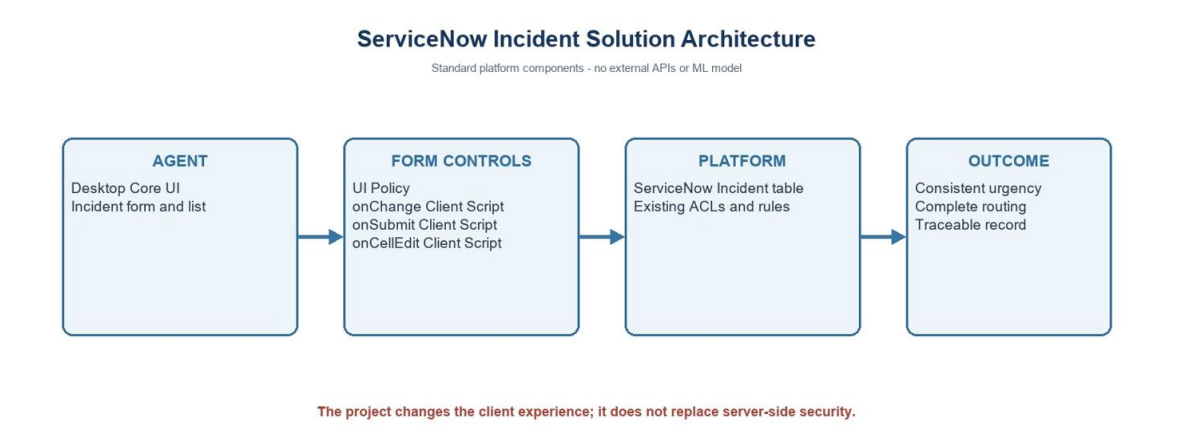

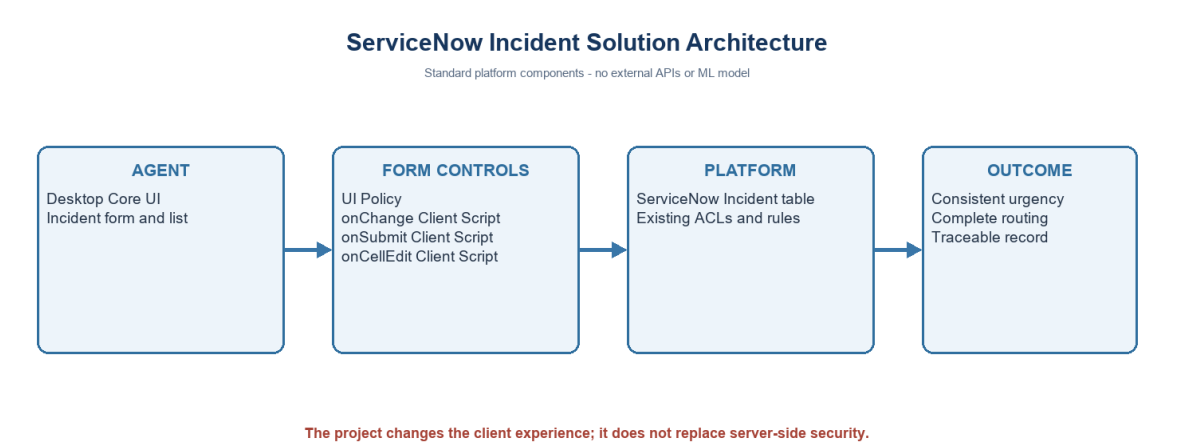

Figure 1: Architecture and data flow of the voice patient diary sample application

Incident client control architecture

Component	Responsibility
Incident form/list	Collect impact and routing values.
UI Policy	Require group and assignee; lock urgency at high impact.
Client Scripts	Set urgency, validate submit, block list State edit.
Incident table	Platform persistence and existing server controls.

Project note: values use the standard Incident choices where Impact 1 and Urgency 1 represent High. Confirm field names and values in the target instance.
